High Density Setting Compounds

- NON Sandable
- Low Shrinkage
- Use for embedding tape, heavy fills and repairs

ProRoc[®] High Density Setting Compounds are used to embed joint tape and to conceal joints, fasteners and trim accessories on gypsum wallboard. Recommended for heavy fills or when exceptional bond is necessary. It is specially formulated to harden with very little shrinkage. This enables drywall joints to be taped and first coated with High Density, and once set, the joints can be finished with Drywall All-Purpose Compound — all in the same day.
